► The Client Requirements

To supplement the functionality built into their already spectacular product, Alteer discovered that they needed a reporting module within their application. Such a module needed to provide a tool to analyze the performance within a variety of managerial aspects. This module would need to provide numerous detailed reviews of the financial status of the practice, as well as provide a synopsis of patient history, a breakdown of workflow bottlenecks, and a birds-eye view of the efficacy of the practice as a whole.

In order to accommodate what was specifically needed of each individual practice, the module would have to be a dynamic reporting tool empowering Alteer to design customized reports to provide the information pertinent to their business case. In providing such powerful flexibility to the end user, the module had to maintain the speed and accuracy mandatory for application in the health industry.

► The UI Solution

The creation of such a powerful and dynamic tool was a task that could only be created by a team accustomed to the latest in reporting design and technology. Unlimited Innovations, Inc. (UI) had the experience and expertise in application reporting that would accommodate the needs and exceed the expectations of Alteer.

The solution developed by UI matched the design requested by Alteer, both in accuracy and adaptability. Given the tools and team present in the Alteer environment, UI was able to merge with their development process and provide an application that would give Alteer the capabilities they requested. The on-site support provided by UI allowed the reporting module to shape itself into an integral part of the Alteer product.

► The Client

Founded in 1996, Alteer sought out to integrate an entirely new and more effective paperless healthcare working environment. This idea was based around the growing use of electronics on a daily basis. As this idea formulated into very tangible goals, Alteer began to craft and produce new-age software programs customized specifically for physician's use. Alteer created software that seeks to incorporate years of exhaustive research and focus group assessments to itemize each step of the workflow, identify the bottlenecks in the established methodology, and streamline the daily actions of a typical medical practice.

With the success of this software, Alteer has able to expand their target market from only Southern California to across the U.S., reaching over 5,000 users and 30 specialties. Alteer continues to evolve their solution to meet the needs of its growing clientele. With the launch of the Pocket Alteer Office, the first application to consolidate all practice related tasks onto a PDA, Alteer completed the first paperless workplaces in the industry.

Leading the pack in practice workflow management and administration applications, Alteer has positioned themselves to be a pioneer in bringing the physician's office into the 21st century.

The Success of Innovative Solutions

Alteer now utilizes module analysis from a birds-eye view

► The Technology

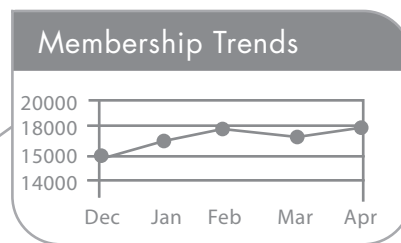

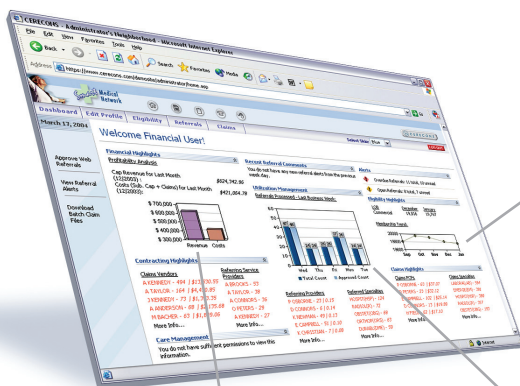

UI used tools such as Visual Basic for the front-end interface, and MS SQL Server 2000 for the back-end as the data store communicating through client's proprietary transaction framework developed in C++. The reporting module itself was developed in Visual Basic through integration of Data Dynamics Active Reports component.

► The Benefits

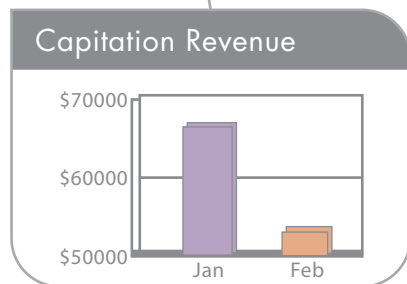

With the new adapted software, Alteer was able to:

- * Enhance the functionality and value of the Physician Office Management Software
- * Provided the accuracy and customization ability to meet the needs of any and all medical practices Alteer may try to reach
- * Spark interest their prospective clients with the added value and enhanced functionality, thereby increase sales for all partnered companies
- * Seamlessly integrate into the scheduling, notification, and managerial aspects of the existing product allowing the reporting features to blend into the day-to-day system usage

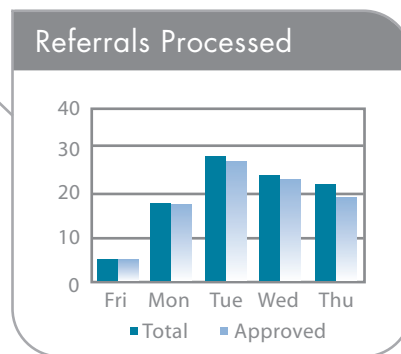

► Dashboard Highlights

Track eligibility growth and other demographic changes

Compare revenue and expenses for the current period based on capitation and claims

Monitor efficiency of handling authorization requests

Unlimited Innovations Inc., a California-based company established in 1996 is a leading Software Solutions Provider. We provide Systems Integration, Consulting and Development services on all platforms ranging from the latest XML and ASP-based web applications, Oracle and SQL Server database applications to Integration with Legacy Mainframe and UNIX systems.

Our Microsoft Certified Staff is available to meet your needs in all the latest Microsoft Technologies including Windows 2000, SQL Server 2000, Exchange 2000, Visual Studio and the .net Enterprise Servers.

From mid-size to Fortune 50 organizations, our experts are experienced in designing enterprise-wide architectures and developing IT Strategic Plans.
