

Use a Broad Range of Lab Results to Manage High-Risk Populations

- Can you easily find all Medicare Advantage patients with HbA1c (blood sugar) levels greater than 6.5%?
- Can you quickly determine the percentage of your patient population with LDL levels greater than 130?
- Can a physician view a patient's entire lab result history in just a few keystrokes?

Lab results are often a problem for medical organizations because of the large number of patients and the high volume of lab results constantly being updated from a variety of sources. There has not been a quick, easy and cost-effective way to analyze lab data to benefit patients and healthcare organizations...

...Until now.

Software dashboard displays at-risk population; patient information exports easily to support action plans.

Lab Registry Module

CERECONS' ground-breaking Lab Registry software module allows medical organizations to quickly, easily, and inexpensively retrieve and analyze lab data at both the patient level and for a broader population.

The software, accessible from any web browser, centralizes all lab reports and patient contacts into one location, providing a valuable software tool to help you proactively manage patient care on a system-wide and episodic basis.

About Lab Registry

Features

- Single-source solution for centralizing lab results on both population and single patient basis, plus entire patient contact history
- CERECONS® easily handles the import of all lab data
- Monitor, track, and set alerts to identify at-risk patients across the entire patient population or drill down by patient episode
- Intuitive, easy-to-read interface with all information accessible from any computer with an internet connection

Benefits

- Easily identify at-risk patients for proactive care and additional services
- Easily and quickly identify Medicare Advantage patients with at-risk lab results for potential HCC score improvements
- Facilitates clinical integration
- Increase regulatory compliance and supports best practices
- Enhance disease management and improve preventive care
- Save time and create efficiencies through centralization of patient lab results and related communication

Lab Registry sample results

- Target, acceptable, and at-risk levels
- General Population, Subset Population, and Individual Lab Reports
- Lipid Panel, Renal Panel, Diabetes Panel (and other results as provided by various lab data source)

Save Lives and Provide Additional Services

A medical organization can identify all Medicare Advantage patients with at-risk diabetes, lipid panel, or other desired lab results and proactively begin treatment programs. This brings immediate opportunities to deliver new medical services and improve the well being of patients.

Lab Registry for current CERECONS clients

If you already have CERECONS installed, you can be up and running with the new module in as little as a week if you are already receiving digital files from your laboratory partners in the CALINX or HL7 formats. Other formats can sometimes be supported depending on the detail of the information provided. The CERECONS implementation team is experienced in importing automated and real-time data. Once the data imports are set up the module is ready to go live.

You will find the same intuitive, easy-to-use web interface on Lab Registry as with all the other CERECONS modules. Because CERECONS already hosts your software, there is nothing to install. Just a little user training and you're ready to go.

Lab Registry is priced very affordably as part of the monthly CERECONS system cost; you'll find the additional services you can provide, reduced administrative effort, and ultimately the improved health of the patient population will demonstrate the soundness of your decision to implement Lab Registry.

Lab Registry for new CERECONS clients

If you are not yet a CERECONS user, Lab Registry may be an excellent module to get started with. Because CERECONS is designed as a set of separate functional modules, you can start with as few or as many modules as you like. Lab Registry would be a very quick and easy introduction to our rich set of features.

Hassle-Free Software

CERECONS software is Software as a Service, meaning it runs on host computers, not on your computer. So there is no software for you to install, no necessary hardware upgrades. Access to all your CERECONS information is as close as the nearest internet-connected PC.

About CERECONS

CERECONS® provides healthcare organizations with rapid, affordable means to manage a wide range of clinical and operational data, and also provide patients with access to their healthcare information. As a web-based Software as a Service (SaaS) offering, CERECONS® can be quickly installed and consistently maintained with minimal impact on internal information technology resources. Health plans, medical groups, hospital administrators, physicians and patients benefit from simplified healthcare transaction processing and coordination. CERECONS® is the healthcare division of Unlimited Innovations, Inc. www.cerecons.com
