

Monitor Performance. Detect Fraud. Analyze Risk.

Gain Broad Understanding of Complex Financial Data Quickly & Efficiently with Domain Expertise & Software Tools from Unlimited Innovations & Panopticon Visualization Software

- Identify the stock that had the strongest one-day percent close
- Identify the industry with the greatest three-month percent change
- Identify the exchange that had the most orders executed on it
- Identify stocks that are over / underperforming by greater than 20% on a one-month basis
- Drill into financials to determine which security is performing the best on a one-week percent change

Analysts, portfolio managers, and executives in fast-paced investment firms need access to rapidly-changing, time-sensitive data to help them monitor trading performance, identify trends, and assess risk. They also rely on timely data to improve business processes, reduce operational costs, and identify opportunities to increase sales and profits.

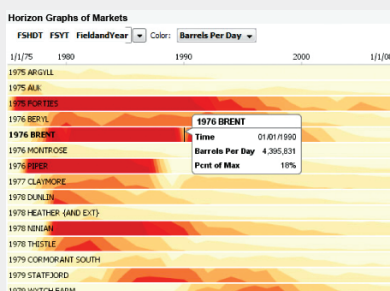

Despite this critical need, many firms still rely on static, low-tech tools like Excel spreadsheets for their data sets, spending a disproportionate amount of time configuring and analyzing rows and columns of numbers, then translating them into one-dimensional pie charts and bar graphs.

But that’s all about to change, thanks to a partnership between Unlimited Innovations, Inc. and Panopticon Visualization Software.

Here are just two examples of the many innovative graphs and charts available to UI clients through Panopticon Visualization Software...

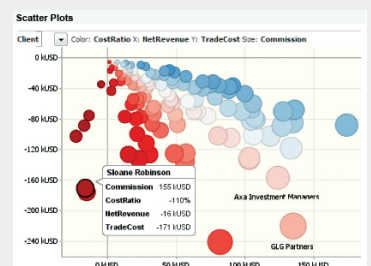

Horizon Graphs

Horizon Graphs display a large number of time series for trends and correlations typically hidden in traditional time series views. This visualization packs the data in a line graph using 17% of the space. Scan huge amounts of data points and easily identify areas that require attention.

It is difficult to identify outliers or clustering in very large databases. Reports and standard table displays are time consuming to interpret. Scatter Plots are the right choice when you are looking for outliers, clusters or trends in large data sets.

Scatter Plots

The Unlimited Innovations & Panopticon partnership delivers immediate benefits to capital market and other investment firms:

- Panopticon's innovative software suite contains a variety of very powerful data and visualization techniques to let users take control of their data.
- UI's significant Finance domain expertise allows its Finance Professional Services consultants to quickly assess an investment firm's client profile and data needs, then develop a data model for Panopticon software to match those needs.
- UI's team configures Panopticon's suite of innovative dashboard and data visualization software to the firm's existing data source [e.g, transactional database, real-time streaming message bus, or CEP engine].
- Once pre-launch testing has been completed and the software is pushed live, analysts, portfolio managers and other personnel will gain immediate access to real-time financial data, allowing them to perform in-depth analyses of complex information with deeper insight and greater clarity.
- In addition to customizing Panopticon's software, UI will provide firms with pre and post-integration training to ensure optimization of Panopticon's visualization software and dashboard tools.
- Firms will be enabled to use any combination of visualizations in multi-tabbed dashboards published to the web or desktop, or integrated into websites, Intranets, and portfolio tools.

About UI Finance Professional Services

Unlimited Innovations' Finance Professional Services delivers cost-efficient custom software development, workflow solutions, and outsourcing services to the financial services industry. Our versatility and breadth of experience offers a unique combination of strengths that differentiate us from large consulting firms and specialized IT companies including rapid development and deployment capabilities, domain expertise, data interface expertise, and client experience.
