

# Professional Services from Unlimited Innovations, Inc. It's Innovation On-Demand

uius.com

- Commit your internal resources more strategically while still advancing your current IT projects
- Start major developments in a fraction of the time using UI's A.R.M. (Accelerated Ramp-Up Model)
- Align your IT Goals with your business needs in less time
- Maintain current systems and infrastructures more affordably

UI's outsourcing approach takes the guess work out of project estimation and project delivery with the following pre-designed customizable engagement packages.

## **CRISP (Conversions, Reports, Interfaces, System Testing, Prototypes/Performance Tuning)**

**Give your IT staff the flexibility to pursue new IT initiatives.** If you feel as though too many internal resources are committed to maintaining existing platforms or that your strategic projects are being tabled, a UI CRISP project could help.

**Reduce your application/enhancement backlog.** UI can assess and define a schedule to clear your IT backlog ensuring that your own team is working on the essential projects for the company's future.

**Clarify business user requirements.** UI can create quick mockups and prototypes to ensure the solution meets business objectives.

## **EWOS (Enterprise Wide Outsourcing Strategy)**

**Discover which IT projects are the best candidates for outsourcing.** Our management team will provide templates, checklists and expert cost/benefit analysis for outsourcing and off-shoring.

**Develop a strategic roadmap for outsourcing/off-shoring.** Our domain experts will provide 1-2 meetings of analysis and feedback. This feedback will provide you with operational, business development and maintenance insight for your current environment as well as planning models for the future.

## **Innovation On-Demand**

**Flexible engagement options.** For our Innovation On-Demand package you are given the freedom to choose how often you'll need our services. We are available for a fixed number of hours per month for short lead-time directed initiatives, based on your contract choice.

**Direct Access to technical and domain expertise.** We provide our customers with a T.E.M (Technical Engagement Manager) to help them access our technical and business domain experts in a variety of technologies. Our T.E.M. will also provide access to web-based project tracking software to furnish necessary project metrics for a successful project engagement.
